## Foundation Piers

Contractor warrants that the foundation piers will stabilize the affected areas(up to a 4' radius from the center of the pier bracket) against further settlement for 25 years from the date of installation, or else Contractor will provide the labor and materials, at no cost to Customer, to correct the problem with the foundation piers. This warranty is applicable specifically and only to the areas in which Contractor has done stabilization work, and does not imply that other areas that have not been stabilized by Contractor will not see effects of settlement in the future. Contractor does not warrant to lift, to close cracks, to render doors and windows operational, or to move walls back to their original position, but will do its best to achieve positive results in this regard. Customer should be aware that damage can occur to the structure during a lift operation and that Contractor is not responsible for such damages. Should contractor encounter previous work that wasn't disclosed during the inspection, a passthrough cost might become necessary. Foundation piers provide vertical support only and cannot be expected to provide lateral support. If lateral movement occurs, additional work may be needed at an additional cost. Should, during installation, old repair efforts that were previously undisclosed lengthen the installation time or require rental of additional equipment and/or additional cost may be incurred.
